INTRODUCTION

In this section, give a definition and history of the term "walled garden". Give examples of systems that are called walled gardens and explain why some people them that.

In all sections, always cite your references whenever they come up in the text, as in [1]. Do not entirely copy-paste from other resources or just change the wording. Read the original resource, understand it and rewrite it in your own framework. Follow the margins, font sizes and paragraph spacing in this template document.

//definition, history of term

By definition, the term "walled garden" stands for a ecosystem of information or technology, which is bounded by the supplier in order to promote commercial interests, ensure system security or hide information [1] [1]. Bounding can be explained as blocking or making it difficult to obtain context from outside of the environment which consists preselected services [2].

The term "walled garden"

//   The history of the term dates back to 1990s, used initially by John Malone ... //

Certain internet service providers such as America Online (AOL) and some schools can exemplify the term walled garden because of mechanisms they use to restrain access of children to context like pornography [3]. A more recent example is that photo sharing platform Instagram which is possessed by Facebook, is started to prevent sharing links of some of their competitor social applications such as Snapchat and Telegram [4].

These ...'s are called walled gardens because   //neden bunlar walled gardensa örnek açıkla!!
